

Life-changing products for allergy sufferers

Our products trap and neutralise the harmful allergens that cause sneezing, wheezing, asthma, eczema and hives

According to the Royal College of Physicians, there are 18 million allergy sufferers in the UK and less than 100 full-time allergy specialists to meet their needs! The **Bio-Life HomeCare Range** is formulated to reduce the allergens at source, from soft furnishings, bedding, clothes, the air, and of course – your pet.

## THE TYPICAL SYMPTOMS

- Allergy sufferers are prone to one or more of the following:  
Perennial Rhinitis (running nose and/or frequent sneezing)
- Allergic Conjunctivitis (itching, irritable & hypersensitive eyes)
- Wheezing & Asthma
- Sore, Tickly Throat
- Allergic Dermatitis & Hives

In very serious cases, patients may go into anaphylactic shock (heart palpitations and even black-outs) and this requires immediate medical treatment and the use of adrenalin pens. Anaphylactic shock is more often associated with food allergies than environmental allergic reactions. The **Bio-Life HomeCare Range** for allergy sufferers deals with environmental allergens.

Around 62% of patients suffer from multiple allergies and not just one. Total allergen avoidance is impossible but fortunately, over 97% of allergy sufferers are Allergen Hypersensitive and not Atopic. Allergen hypersensitive patients respond positively to reductions in the allergen levels in the home. In independent trials in the UK and Israel, over 97% of patients have reduced their requirements for medication by at least two-thirds within 2 weeks and to zero within a month with the regular use of the **Bio-Life HomeCare Range**.

## THE MOST COMMON CAUSES OF ALLERGIC REACTIONS IN THE HOME

Pollen

Dustmites

Pets

Mould

## DUSTMITE ALLERGY SUFFERERS

Dustmites cause allergic reactions in people and in pets so the treatments apply to all members of the household --- two legged or four!

Dustmite allergens are present in their faeces and their remains when they die. The residues of dustmites are found principally in mattresses, bedding, sofas, carpets and soft furnishings that you and your pets use frequently. The allergic reactions occur when you or your pet breathe them in or come into contact with them. Although they are mainly inhaled, eczema is as common a reaction as wheezing and asthma especially in infants and pets.

To get rid of dustmites, you need the following products:

**Bio-Life HomeCleanse®**, the soft furnishing spray for use on beds, pillows, sofas and any other soft furnishing that you cannot put in the washing machine.

### DIRECTIONS FOR USE:

Spray at the rate of 4 sprays per square metre, once per month.

**Bio-Life FabriCleanse®** to treat laundry or clean carpets.

### DIRECTIONS FOR USE:

**LAUNDRY** - Add 25-30 mls to your normal washing powder and wash as normal. Effective in cold or hot washes.

**CARPET CLEANING** - Add 1 ml per litre of carpet cleaning fluid and apply as normal.

## PET ALLERGY SUFFERERS

Pets are the second most common cause of allergic reactions in the home and all pets with fur or feathers are potential sources. Pet allergens come from the saliva, the urine and the sweat glands, dry and become airborne. In fact, within 24 hours of licking or secretion, 80% of the particles will be in the air so routine vacuuming and dusting does not remove them. Rhinitis, conjunctivitis, wheezing and asthma are the commonest symptoms but in infants, eczema or hives are also common.

If you are allergic to pets, you need the following products:

**PetAllCleanse®/C** for cats and small pets or **PetAllCleanse®/D** for dogs. The wipe on, wipe off solution removes the allergens from the coat.

**PLUS Bio-Life AirCleanse®** if you suffer from eye, nose, throat or chest irritations.

**Bio-Life HomeCleanse®** if you suffer from eczema or hives.

## DIRECTIONS FOR USE

### PetAllCleanse C or D®:

Put 25 -35 mls of the lotion on a dry cloth and wipe the pet with and against the fur.

With a fresh cloth, WIPE the lotion and the encapsulated allergens off the coat.

USE once per week. EVERY week!

**AirCleanse®** Spray your rooms at the rate of 1 spray per 5 cubic metres twice per week for the first 3 weeks and once per week thereafter.

### HomeCleanse®

Spray soft furnishings at the rate of 1 spray per 4 square metres once per month.

**Multiple allergy sufferers** or allergy sufferers who do not know the source of the problem are advised to purchase the STARTER PACKS with or without the pet cleanser depending on whether there are any pets in the home and to call the Bio-Life Allergy Helpline for help and advice:

**Telephone: 00 44 1608 686626, open 8am to 5pm, Mon to Fri; 10am to 4pm, Sat/Sun**

**Email: [sales@biolife-international.co.uk](mailto:sales@biolife-international.co.uk)**

## MOULDS

Moulds produce spores that are potentially toxic causing nose, lung and even organ disorders. Moulds affect everyone and should not be tolerated in the home because they are a serious threat to health.

If you have mould on any surfaces then you need the following products:

**Bio-Life FabriCleanse®** to wash down any hard surfaces e.g. tiles, window frames or floors.

### DIRECTIONS FOR USE:

Add 1 ml per litre of normal cleaning solution and apply vigorously to the affected areas. Use twice per week until the mould is cleared.

**Bio-Life HomeCleanse®** spray to treat any soft furnishings.

Spray the soft furnishings affected twice per week at the rate of 1 spray per 4 sq metres until the infestation is clear.

PLUS: **Bio-Life AirCleanse®** to remove airborne spores.

### DIRECTIONS FOR USE:

Spray all your rooms at the rate 1 spray per 5 cubic metres once per day until the infestation is cleared.

## POLLEN (Hayfever)

Grass and tree pollen cause hayfever during the spring and summer. We cannot remove the pollen in the fresh air but we can ensure that your home especially your bedroom is pollen free. Reducing the time that you are exposed has the same effect as reducing the pollen count. The pollen count is at its highest at midday and again between 5pm and 6pm in the evening.

If you are a hayfever sufferer, you need:

**Bio-Life AirCleanse®** to neutralise the pollen in your home.

### DIRECTIONS FOR USE:

Spray your living rooms at midday and again between 5 & 6pm in the evening

Spray your bedroom last thing at night

Application rate: 1 spray per 5 cubic metres

**Bio-Life FabriCleanse®** to remove pollen from your clothes.

### DIRECTIONS FOR USE:

Add 25-30 mls to your normal washing powder and wash as normal. Use routinely throughout the pollen season.
